

CHAKHIT KANCHANAKITTIPHAISAN

Bangkok, Thailand | chakhit.kanchana@gmail.com | 083-869-4010 | [GitHub](#) | [LinkedIn](#) | [Transcript](#)

EDUCATION

- Rangsit University (RSU)
- Bachelor of Science in Computer Science
- GPAX: 3.32

TECHNICAL SKILLS

- Frontend: Next.js, React, Vite
- Backend: Node.js, Express.js, FastAPI
- Database: MySQL, Prisma ORM, MariaDB
- Languages: JavaScript, TypeScript, Python, Go, Lua, Dart, SQL
- Machine Learning: Data preprocessing, Feature engineering, Model deployment
- Systems: REST API design, Authentication systems, Web services architecture
- Tools: Git, GitHub, Nginx, Cloudflare, Linux, Windows VPS

WORK EXPERIENCE

Freelance Full-Stack Developer (Contract)

(Aug 2025 - Present)

- Built full-stack web applications using Next.js, React, Express.js, Prisma, and MySQL.
- Designed RESTful APIs and relational database schemas.
- Deployed and maintained production applications on VPS using Nginx, Cloudflare, and SSL.
- Delivered production-ready systems based on client requirements.

FiveM Server Full-Stack Developer (Contract)

(Jan 2024 - Present)

- Developed client-side and server-side systems using Lua and JavaScript.
- Built game features such as inventory, economy, and player management systems.
- Designed MySQL database schemas for persistent player data.
- Managed VPS deployment and server performance optimization.

PROJECTS

License Management System

- Built a web-based licensing platform with dashboard and RESTful API.
- Developed hardware-based license authentication (HWID) system.
- Designed backend architecture using Prisma ORM and MySQL.
- Integrated API for real-time license validation with external applications.

AI Weather Forecasting API

- Developed a machine learning pipeline for 168-hour weather forecasting using Python and FastAPI.
- Built automated workflows for data collection, preprocessing, and feature engineering.
- Deployed ML models through a backend API for real-time inference and prediction services.

Lune Programming Language

- Designed and built "Lune", a statically-typed programming language inspired by Lua, implemented from scratch in Go.
- Implemented a full compiler pipeline including lexer, parser, AST, and bytecode generation.c
- Built a custom virtual machine (VM) to execute compiled bytecode.
